Machine Learning based Species Distribution Modelling

2023 ITCOcean training course: 11-22 September 2023, INCOIS, Hyderabad, India

Welcome to the Sept 2023 training course on **Machine Learning based Species Distribution Modelling** hosted by the International Training Centre for Operational Oceanography (ITCOcean), ESSO-INCOIS, Hyderabad, India.

The course and hackweek will take place at the ITCOcean Training Centre in Hyderabad, India from **September 11-22, 2023**. [course announcement](#). The application period for the 2023 course has closed.

Ocean climate change has happened and will continue

(a) 2020 OHC anomaly at upper 2000m relative to 1981-2010 baseline (10^9 J m^{-2})

Many
projected
impacts on
global
fisheries

Cheng, L. J., and Coauthors, 2021: Upper ocean temperatures hit record high in 2020. *Adv. Atmos. Sci.*, 38(4), 523–530, <https://doi.org/10.1007/s00376-021-0447-x>.

Artisanal and coastal fisheries are more impacted

People depend on fish for food

the impacts are exacerbated
by a disparity in available
resources

the disparity extends to Indian
Ocean Rim scientists – the
people who will lead the
science and innovations

**2021
2030** United Nations Decade
of Ocean Science
for Sustainable Development

Decade Collaborative Centre
Indian Ocean Region

Young scientists are missing
out a crucial area of
advancement in earth
sciences in the era of “big
data”: training in geospatial
tools and large collaborative
communities.

Example: NASA but not only NASA

The 2i2c JupyterHub for ITCOcean

Operated by: **2i2c** | Funded by: **ESIP** | Designed by: **2i2c**

Log in to continue

Welcome to the ITCOcean **2i2c**
JupyterHub.

This is a pilot service running on open source
infrastructure. See [the 2i2c Pilot documentation](#) for
usage and deployment information.

Challenges that were hindrances but not barriers

None of the participants had experience with Jupyter notebooks much less JupyterHubs	The platform is fairly intuitive and they helped each other.
Few of the participants had experience with Git or GitHub	We minimized that aspect by using a shared drive for the hack week.
Many of the participants had little coding experience	That was difficult. The few coders were stretched very thin and worked with multiple groups. <i>Need more coders and more intro coding workshops</i>
Not many had experience with remote-sensing data	That was also difficult. The virtual helpers were critical. <i>Need more templates for the coders.</i>

Barriers that we learned

Visas! None of the African applicants were able to get visas.	<ul style="list-style-type: none"> • <i>Run workshop in E Africa</i> • <i>Develop 'sister' workshops</i> • <i>Much longer lead times</i>
Participants (and instructors) need travel funds. Cost was ca \$300-400 but that's might be 2 months grad salary	<ul style="list-style-type: none"> • <i>Put in grants for travel funds</i> • <i>Find philanthropic organizations</i> <ul style="list-style-type: none"> • <i>Hybrid options</i>
Sustaining communities: JupyterHubs on local infrastructure	<ul style="list-style-type: none"> • <i>Need to come early and set-up local JupyterHubs on local servers</i>
Internet speed was a barrier. Even though we were at INCOIS, the local IT gave participants highly limited internet. Most hot-spotted in.	<p>This needs to work on cellphone speed internet.</p> <ul style="list-style-type: none"> • <i>Test everything on throttled internet!</i>
